Power loss	
Power loss (max.) P <sub>I (max.)</sub> (note)	When selecting glass cartridge fuses, make sure that the maximum power loss listed below is not exceeded. The power loss is determined according to IEC or EN 60947-7-3/VDE 0611-6 at 23°C. The temperature rise of the terminal block must be checked according to their application and mounting. Higher ambient temperatures represent an additional impact on miniature fuses. Therefore, in such applications, the rated current must be reduced if necessary. More details are available from the manufacturers.
Power loss P <sub>1</sub> max. overload and short- circuit protection (individual arrange- ment)	2.5 W
Power loss P <sub>I</sub> max. overload and short-circuit protection (group arrangement)	1.6 W
Power loss P <sub>I</sub> max. short-circuit protection (individual arrangement)	4 W
Power loss P <sub>I</sub> max. short-circuit protection (group arrangement)	2.5 W

#### **Terminating Aluminum Conductors**

WAGO spring clamp terminal blocks are suitable for solid aluminum conductors up to 4 mm²/12 AWG if WAGO "Alu-Plus" Contact Paste 249-130 is used for termination

"Alu-Plus" Contact Paste Advantages:

- Automatically destroys the oxide film during clamping.
- Prevents fresh oxidation at the clamping point.
- Prevents electrolytic corrosion between aluminum and copper conductors (in the same terminal block).
- Provides long-term protection against corrosion.

Using terminal blocks with CAGE CLAMP® Spring Pressure Connection Technology, aluminum conductors must first be cleaned with a blade and then immediately be inserted into the clamping units filled with "Alu-Plus" Contact

It is also possible to apply WAGO "Alu-Plus" **additionally** on the whole surface of the aluminum conductor before termination

Please note that the nominal currents must be adapted to the reduced conductivity of the aluminum conductors:: 2.5 mm<sup>2</sup> = 16 A 4 mm<sup>2</sup> = 22 A

#### Installation notes

## **Conductor termination**

CAGE CLAMP® connection Inserting a conductor. With ferruled conductors, it is necessary to use a terminal block one size smaller than the conductor's nominal cross-section.

#### Commoning

Commoning Distributing current to several fuse-protected circuits via insulated push-in type jumpers.

#### Testing

Voltage test, either at input or output with fuse holder in closed position (live)

Through test with fuse holder in open position (no voltage)

Voltage test at input in the test slot of the current bar

Testing voltage at the output via separate test slot.

Measuring current between jumper slot and separate test slot.

Testing voltage (input side) via test plug adapter (280-404, shown) or test plug (281-407).

 $5\,x\,20$  mm,  $5\,x\,25$  mm and  $\mathcal{V}\!\!\!4"\,x\,1"$  fuse holders are fitted with stops on the inside of the cover.

# Security

Touch-proof protection in all positions of the fuse holder

Fuse holder will remain safely locked open in vertical assemblies.

# Locking system

Ganging several fuse holders with an interlocking link (example shows 8 mm wide terminal blocks).

Fuse replacement: Before replacing a fuse, pivot the fuse holder into the locked open position.

Fuse replacement:
One end of the fuse is automatically ejected from the holder when opening the cover

Fuse replacement: Easily removing a fuse by hand.

Fuse replacement: Insert a new fuse and snap the cover closed.

Storing a spare fuse (fuse holder without blown fuse indication).

An intermediate plate is supplied with all 10 mm wide fused disconnect terminal blocks. At the end of an assembly, or if there is no adjacent fused disconnect terminal block, an end or intermediate plate must be used.

# Marking

All fuse holders are printed with correct fuse size.

Each fuse holder features two marker slots for custom WMB Multi markers (example shows 8 mm wide terminal blocks).
